## DETAILED ACTION

### **Remarks**

1. In view of amendments and indicated allowable subject matter in previous Office Action, the Examiner withdraws the objections to the drawings and the specification. The Examiner also withdraws the rejection under 35 U.S.C 103(a) to claims 1 and 2. Therefore, all the remaining claims are in a condition for allowance.

### **Allowable Subject Matter**

2. Claims 1 and 4-15 are allowed.  
3. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach or suggest the claimed brushless motor including first and second circuit sections and:

“a fuse member electrically connecting the first circuit section and the second circuit section, an end portion of the fuse member being welded with the first circuit section, the other end portion of the fuse member being soldered with second circuit section, the fuse member cutting an electrical connection between the first circuit section and the second circuit section when a temperature of a part of the second circuit section becomes higher than a predetermined temperature” as in claim 14; or

“a fuse member comprising a first end portion welded with the first circuit section, a second end portion soldered with the second circuit section and an intermediate elastic portion which is elastically deformed when the second end portion is soldered with the second circuit section, the second end portion being released from

the second circuit section when solder connecting the second end portion and the second circuit section is melted" as in claim 15; or

"a fuse member wherein the fuse member is made of elastic and electro-conductive material, wherein a first end portion of the fuse member is fixed on the wiring metal piece of the first circuit portion, wherein an other end portion of the fuse member is soldered with the wiring pattern by means of solder which melts at the predetermined temperature, wherein the other end portion of the fuse member is inserted into a through hole formed on the printed wiring board, and wherein the other end portion of the fuse member is soldered with the wiring pattern formed on a back of a surface of the printed wiring board which is opposite to the wiring metal piece" as in claim 1.
